The invention relates to an isolated polypeptide comprising: any of 28 cc sequences of 48-1256 amino acids; a natural amino acid sequence at least CC 90% identical to the 28 amino acid sequences, 94% identical to a sequence co of 703 or 267 amino acids, 96% identical to a sequence of 414 amino coids, or 97% identical to a sequence of 642 amino acids, all given in CC the specification; or a biologically active or immunogenic fragment of CC with the decreased expression of protein modification and maintenance complexity in the decreased expression of protein modification and maintenance complexity. The polypeptides and polymucleotides are useful complexity in the decreased expression of protein modification and maintenance complexity. The polypeptides are useful complexity in a second expression of protein modification and maintenance complexity. The polypeptides is grown, parkingon's disease, complexity. The polypeptides is grown, parkingon's disease, complexity. The polypeptides is grown and discretive (e.g. allergies), aparticipation in a session the expression of the complexity of proteonally. These are also compounds on the expression of mucleic acid and amino acid sequences of pMOD. The pMOD or its compounds on the expression of the compounds to the polypeptides, or in altering the expression of the target polymucleotide and compounds that specifically bind to or modulate compounds in the polypeptide. The microarray is useful in monitoring compounds on the expression of the activity of the polypeptide. The microarray is useful in monitoring compounds on the polypeptide. The microarray is useful in monitoring compounds on the polypeptide. The microarray is useful in monitoring compounds on the polypeptide. The microarray is useful in monitoring compounds on the polypeptide. The microarray is useful in monitoring compounds in the polypeptide. The microarray is useful in monitoring compounds in the polypeptide. The microarray is useful in monitoring compounds in the polypeptides of the polypeptides of the poly

or aberrant cellular proliferation and/or differentiation (e.g. colon or clump cancer), immune disorders (e.g. selective IGA deficiency, rheumatoid arthritis, diabetes, allergy), heart or cardiovascular disorders (e.g., hypertension, atherosclerosis, arrhythmias, ischaemic heart disease, myocardial infarction, thrombus) including endothelial cell disorders (e.g. psoriasis, Grave's disease), haematopoietic disorders, brain cliding endothelial cell disorders (e.g. psoriasis, Grave's disease), haematopoietic disorders, brain cliding endothelial cell disorders (e.g. psoriasis, Grave's disease), liver disorders or platelet disorders (e.g. obseity), liver disorders or platelet chisorders. They are also useful in screening assays, predictive medicine (e.g. diagnostic assays, prognostic assays, monitoring clinical trials and pharmacogenetics) and prophylactic and therapeutic methods. The nucleic acids may also be used in chromosome mapping, tissue typing and forensic biology and as surrogate markers. Sequences of the invention are also used in gene therapy. The present sequence is human glycoprotease

The CC 38650 nucleic acid molecule comprises a sequence encoding adenosine CC deaminase. The 28472 nucleic acid molecule comprises a sequence encoding comprises a sequence encoding thuman glycoprotease. The 5495, 65507, 81588 and 14354 comprises a sequence encoding comprises a sequence encoding a human glycoprotease. The 5495, 65507, 81588 and 14354 comprises comprises comprises a sequence are useful for diagnosing, preventing or treating a subject comprise comprise of the veloping a disorder, e.g. cancer or aberrant comprise comprises are useful for diagnosing, preventiation (e.g. breast, ovarian, comprise comprises and/or differentiation (e.g. breast, ovarian, comprise comprises and/or differentiation (e.g. breast, ovarian, comprise comprises), immune disorders, heart disorders, cardiovascular disorders, endothelial disorders, heart disorders, comprises and metabolic disorders, composition or platelet disorders, pain and metabolic disorders, comprises and influences and composition, atherosclerosis, heart failure, myocardial infarction, composition, atherosclerosis, heart failure, myocardial infarction, composition, atherosclerosis, heart failure, myocardial infarction, composition, atherosclerosis, heart failure, myocardial infarction, composition, atherosclerosis, heart failure, myocardial infarction, composition, atherosclerosis, heart failure, myocardial infarction, composition, atherosclerosis, heart failure, myocardial infarction, composition, atherosclerosis, heart failure, myocardial infarction, composition, atherosclerosis, heart failure, myocardial infarction, composition, atherosclerosis, heart failure, myocardial infarction, composition, atherosclerosis, heart failure, myocardial infarction, composition, and metabolic disorders, peripheral composition, and myocardial infarction, composition, and myocardial infarction, composition, and myocardial infarction, composition, and myocardial infarction, composition, and myocardial i
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 endothelial disorder; hematopoietic disorder; blood vessel disorder; brain disorder; pain; metabolic disorder; liver disorder; diabetes; platelet disorder; carcinoma; sarcoma; leukaemia; hodgkin's disease; autoimmune disorder; hypertension; atherosclerosis; heart failure; myocardial infarction; ischaemic heart disease; Crohn's disease; Grave's disease; Kawasaki syndrome; Raynaud's disease; aneurysm; cerebral ischaemia; peripheral neuropathy; Alzheimer's disease; Parkinson's disease; anorexia nervosa; cachexia; glycoprotease; gene

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Isogai T, &
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention relates to novel human secretory or membrane proteins (ADA54072-ADA55710) and their coding sequences (ADA5433-ADA54071). The coding sequences are useful in the gene therapy of diseases caused by abnormalities of the proteins, e.g. cancer, inflammatory diseases, osteoporosis or neurological disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 2208

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  밁
                                                         The invention relates to a novel method for detecting soft tissue sarcoma which comprises obtaining a first soft tissue sample from an individual and a normal soft tissue sample from the same or different individual, determining the expression of a gene in both samples and comparing the expression of the gene in both soft tissue samples and comparing the presence of soft tissue sarcoma. The method of the invention has cytostatic applications and may be useful for detecting soft tissue sarcoma, possibly via gene therapy or vaccine production. The nucleic acid sequences may be useful in diagnostic and screening applications. The current sequence is that of a human soft tissue sarcoma-upregulated DNA of the invention. The current sequence is that of a human soft tissue sarcoma within the specification per se but was submitted in CD format by the inventor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Early detection of soft tissue sarcoma comprises determining expression of a gene in a first soft tissue sample and a normal soft tissue sample and comparing the gene expression, also useful in treating soft tissue

CC comprising a naturally occurring polynucleotide sequence at least 90% contentical to the dithp polynucleotide; a polynucleotide complementary to the dithp polynucleotide or its polynucleotide which is at least 90% contentical; or an RNA equivalent of any of the polynucleotides mentioned above. The dithp polynucleotides have the following activities: cantitarteriosclerotic, antiinflammatory, cerebroprotective, antilipaemic, contropic, neuroleptic, controlication, neuroleptic, controlication, neuroleptic, controlication, neuroleptic, controlication, neuroleptic, controlication, neuroleptic, controlication, neuroleptic, controlication, neuroleptic, neuroleptic, neuroleptic, neuroleptic, neuroleptic, neuroleptic, neuroleptic, neuroleptic, neuroleptic, neuroleptic, neuroleptic, neuroleptic, neuroleptic, neuroleptic, neuroleptic, neuroleptic, neuroleptic, neuroleptic, neuroleptic, neuroleptic, neuroleptic, neuroleptic, neuroleptic, neuroleptic, neuroleptic, neuroleptic, neuroleptic, neuroleptic, neuroleptic, neuroleptic, neuroleptic, neuroleptic, neuroleptic, neuroleptic, neuroleptic, neuroleptic, neuroleptic, neuroleptic, neuroleptic, neuroleptic, neuroleptic, neuroleptic, neuroleptic, neuroleptic, neuroleptic, neuroleptic, neuroleptic, neuroleptic, neuroleptic, neuroleptic, neuroleptic, neuroleptic, neuroleptic, neuroleptic, neuroleptic, neuroleptic, neuroleptic, neuroleptic, neuroleptic, neuroleptic, neuroleptic, neuroleptic, neuroleptic, neuroleptic, neuroleptic, neuroleptic, neuroleptic, neuroleptic, neuroleptic, neuroleptic, neuroleptic, neuroleptic, neuroleptic, neuroleptic, neuroleptic, neuroleptic, neuroleptic, neuroleptic, neuroleptic, neuroleptic, neuroleptic, neuroleptic, neuroleptic, neuroleptic, neuroleptic, neuroleptic, neuroleptic, neuroleptic, neuroleptic, neuroleptic, neuroleptic, neuroleptic, neuroleptic, neuroleptic, neuroleptic, neuroleptic, neuroleptic, neuroleptic, neuroleptic, neuroleptic, neuroleptic, neuroleptic, neuroleptic, neuroleptic, neuroleptic, neuroleptic, neuroleptic, neuroleptic
                                                                               Hashimoto's thyroiditis, multiple sclerosis, osteoarthritis, rheumatoid arthritis, scleroderma, systemic lupus erythematosus), infections (e.g. viral, bactérial, fungal or parasitic infection), developmental disorders (e.g. Cushing's syndrome or epilepsy), endocrine disorders (e.g. thrombosis, hypopituitarism, hypogonadism, gigantism, goiter) metabolic disorders (e.g. hypercholesterolaemia, hypoglycaemia, diabetes, hyperlipidaemia, obesity), neurological disorders (e.g. ischaemic cerebrovascular disease, stroke, Alzheimer's disease, Pick's disease, Huntington's disease, Parkinson's disease, Creutzfeldt-Jakob disease, anxiety, schizophrenia), gastrointestinal disorders (e.g. ulcers), transport disorders (e.g. akinesia or multidrug resistance), or connective tissue disorders (e.g. Paget's disease or rickets). This polymucleotide sequence represents one of the human dithp DNA sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New human diagnostic and therapeutic polynucleotides and polypeptides, useful for diagnosing, treating or preventing e.g. leukemia, brain cancer, atherosclerosis, AIDS, thyroiditis, infections, obesity, stroke
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to a novel isolated human diagnostic and therapeutic polynucleotide (designated dithp). The novel dithp polynucleotide comprises: any of 188 DNA sequences consisting of base pairs fully defined in the specification; a polynucleotide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Peralta CH, I

CC comprising a disruption in a protease target gene (PG) selected from CC calcium activated neutral protease type 5 (CAPN5) gene, tryptase 4 gene CC and sialoglycoprotease-like gene. Also described is a targeting construct comprising a first polymucleotide sequence homologous to at least a confirst portion of PG, a second polymucleotide sequence homologous to at comprising a first polymucleotide sequence homologous to at least a second portion of PG and a selectable marker. (II) is useful for CC producing a transgenic mouse comprising a disruption in a protease target CC gene, by introducing (II) into a cell, introducing the cell into a CD blastocyst, implanting the resulting blastocyst into a pseudopregnant CC mouse, where the pseudopregnant mouse gives birth to a chimeric mouse, and breeding the chimeric mouse to produce the transgenic mouse. (I) is confirmed to resulting blastocyst into a pseudopregnant consecution of a protease target gene, by administering an agent to (I) and CC determining whether the expression or function of the disrupted protease target gene by administering an agent to (I) and CC efficacy of proposed genetic and pharmacological therapies for human CC genetic diseases, such as neurological, neuropsychological or psychotic illness. The present sequence represents murine sialoglycoprotease-like gene sequence, which is used in an example from the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    06-DEC-2000;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          δ
sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders
                                                                                                                                               The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain
                                                                                                                                                                                                                                              New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human; chromosome mapping; gene mapping; gene therapy; forensic, food supplement; medical imaging; diagnostic; genetic disorder;
                                                                                                                                                                                                                                                                                                                                                                 Drmanac RT, Liu C,

The polypeptide and polymucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. AAS64197-AAS9454 represent novel human diagnostic coding sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 2734 BP; 773 A; 545 C; 639 G; 763

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        sub-population profiles. Specifically, it refers to classifying an unknown multi-lineage affiliated gene by collecting hybridisation data to develop a gene expression map, in order to determine the discrete sub-population where it is expressed. The present invention describes methods for predicting the lineage commitment of genes associated with the self-renewing haematopoietic (blood) stem cells (HSCs), as well as the nonself renewing multipotent progenitors (MPPs), common lymphoid progenitors (CLPs) and common myeloid progenitors (CMPs), which are collectively referred to as bone marrow stem cells populations. As such, these methods can be used to identify associated multi-lineage affiliated genes and hence the underlying molecular mechanisms in physiological haematopoietic development. This polynucleotide sequence is DNA associated with a murine MPP sub population of cells of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Claim 8; SEQ ID NO 3118; 123pp; English.

                                                                                                                                                                                                                                                                                                                                                                                 associating nucleic acid sequences of unknown function with particular sub-population profiles. Specifically, it refers to classifying an unknown multi-lineage affiliated gene by collecting hybridisation data to develop a gene expression map, in order to determine the discrete sub-population where it is expressed. The present invention describes methods for predicting the lineage commitment of genes associated with the self-renewing haematopoietic (blood) stem cells (HSCs), as well as the non-self renewing multipotent progenitors (MPps), common lymphoid progenitors (CLPs) and common myeloid progenitors (MPps), which are collectively referred to as bone marrow stem cells populations. As such, these methods can be used to identify associated multi-lineage affiliated genes and hence the underlying molecular mechanisms in physiological haematopoietic development. This polynucleotide sequence is DNA associated with a murine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           gene potential; multi-lineage; cell commitment; haematopoietic stem cell; HSC; multipotent progenitor; MPP; common lymphoid progenitor; CLP; common myeloid progenitor; CMP; bone marrow stem cell; mouse; murine; ds.

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
